

## Build a Better Bridge

### Activity:

Build a bridge for your Lego® characters (or other small toys) to safely cross

### Supplies:

- several of the same sized plastic cups
- popsicle sticks or other recyclable or craft materials (cardstock, cardboard, pipe cleaners, etc.)
- tape (duct tape is best, but masking or Scotch tape will work)
- small toys or figures

### Instructions:

1. Create at least a 2-story bridge using cups and other materials around the house
2. Tape the other materials to the cups to make sure they stay together
3. Place the toys or figures on the bridge to make sure they stay and can cross the bridge without falling off
4. Make adjustments, if necessary, to make the bridge stronger/safer
5. Talk about why the bridge works or didn't work and what you had to do to make it work better
